URP Setup

📖 Introduction

This guide will teach you how to set up and install URP if you are using the Universal Render Pipeline (URP) for your Unity project.

🚀 Getting Started

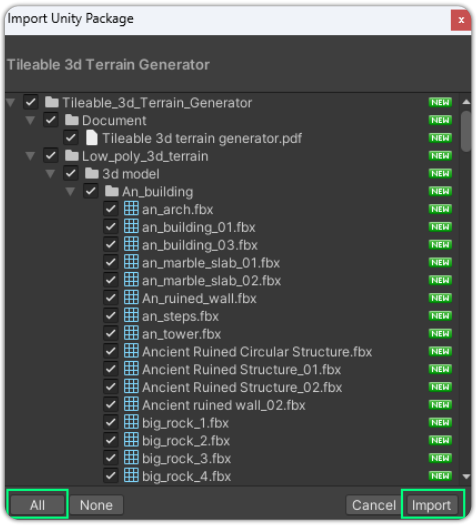

1. Create a **New Project** from the Unity Hub.
2. Select 'Universal 3D core' and name your project, e.g., 'URP Test Project.'
3. Click '**Create project**'

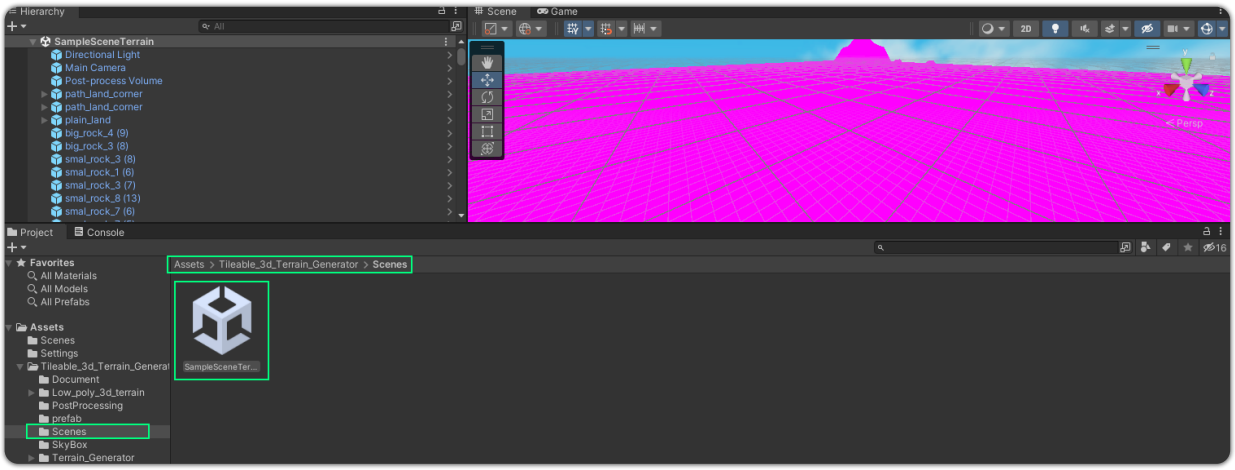

Note: This tool requires Unity 2021.3 or later and works best with 3D terrain prefabs.

Import Unity Package

1. Download / Import the **Tileable 3d Terrain Generator** unity package

2. Open the sample scene folder,
Go to **Tileable_3d_Terrain_Generator > Scenes**

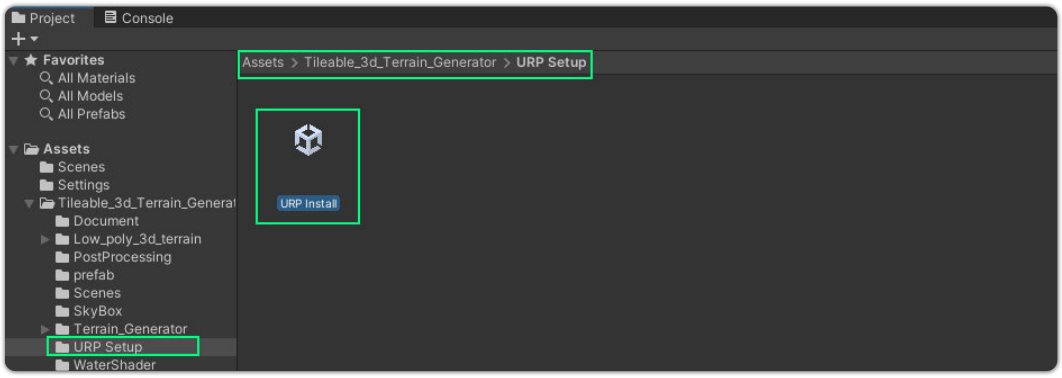

Once you open the sample scene, you will notice a flat pink material error applied throughout. Don't worry; we'll fix it in the next step.

> **Tip:** Make sure your terrain prefabs are properly sized and aligned before using the tool.

🚀 URP Install: Fixing flat pink material issue

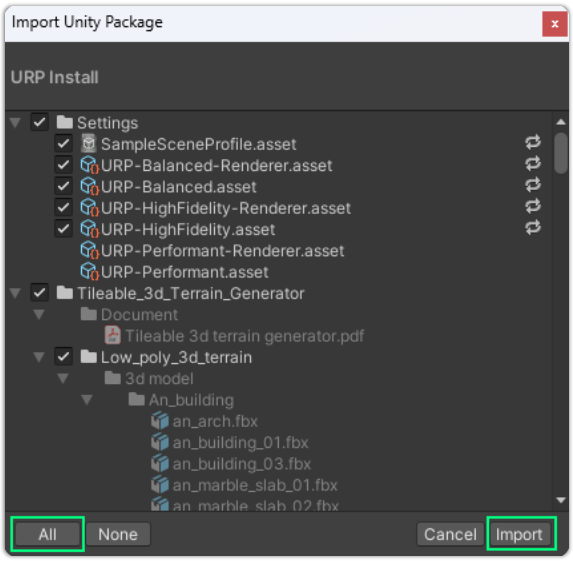

1. Open the URP Setup folder,

Go to **Tileable_3d_Terrain_Generator > URP Setup**

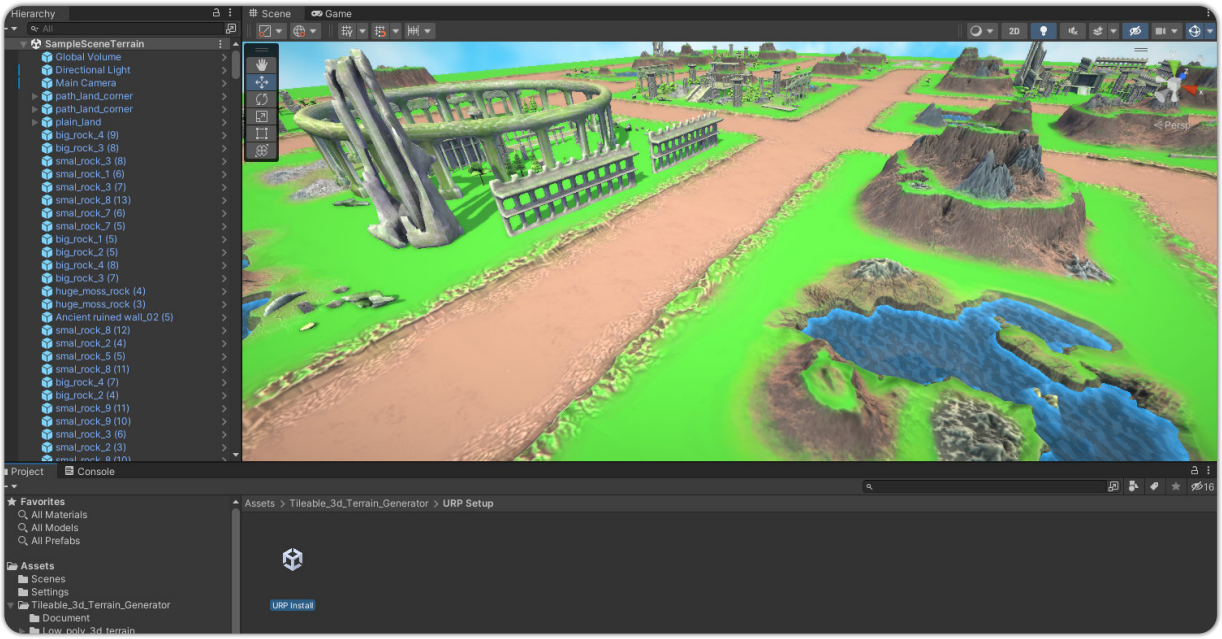

2. Double click on **'URP Install'**

3. Click **All** and then click **Import**

4. A window will popup and click **Reload**

5. After these steps, you will see all the materials in your scene render correctly.

PROMO

Terrain Collection

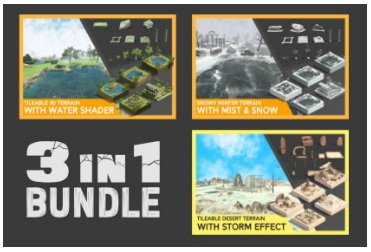

Compatible with **Tileable 3d Terrain Generator**

Please Check out.. our Asset Store Page if you need any other Terrain Asset Pack
